A set is not a yes/no bit.

Tamer, 2010. For me, before the room.

```
Charter for the sentence.  Menlo for the object.  No verdict colors.
```

The report is the image.

The level set is a set of worlds.

$$\{c : I(c) \le \tau_I\} \qquad \texttt{|NROY|} = 991$$

Planted run. The number is already in the note.

What you say is the image of the contrast, not the set of c.

$$\Theta_{\mathrm{hm}} = [0.006,\ 0.073]$$

What you do not say

```
stop
```

Θ_{hm} is not a Manski identified set.

NROY does not mean observationally valid.

A tight regression interval is not a failed estimate of θ_2.

Wash panel, not an alert block. Orange would grade the sentence.
